Walking-Working Surfaces

Eliminating Common Dealership Conditions that cause Slips, Trips, and Falls

Think of a time where you have slipped or tripped and fell

Aside from the pain and embarrassment:

Can you recall the conditions leading to the accident?

TOPIC OBJECTIVES

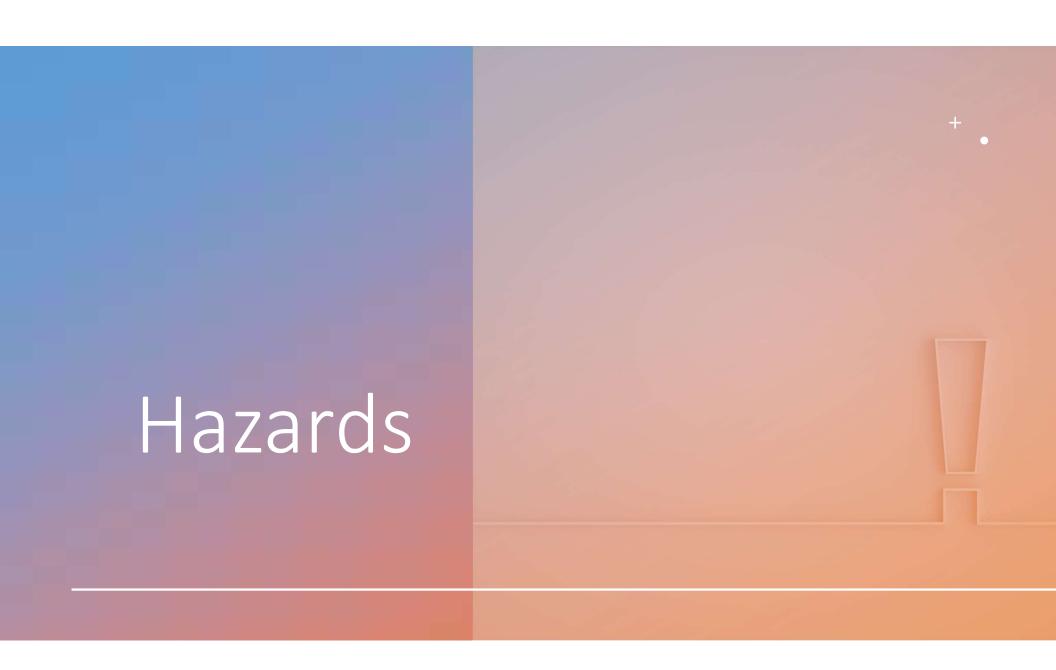

Awareness- Identify the types of hazardous walking surfaces common to your workplace

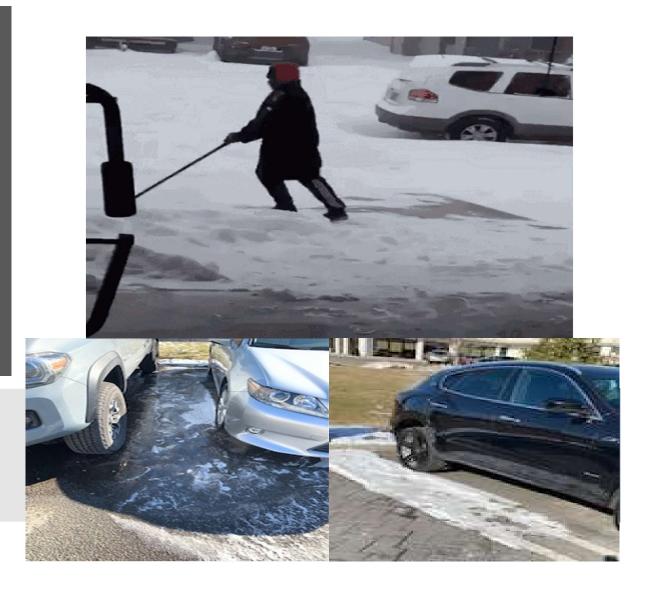

Requirements- Minimum requirements for maintaining safe walking and working surfaces

Correction- Correcting unsafe conditions and behaviors

ICE AND SNOW

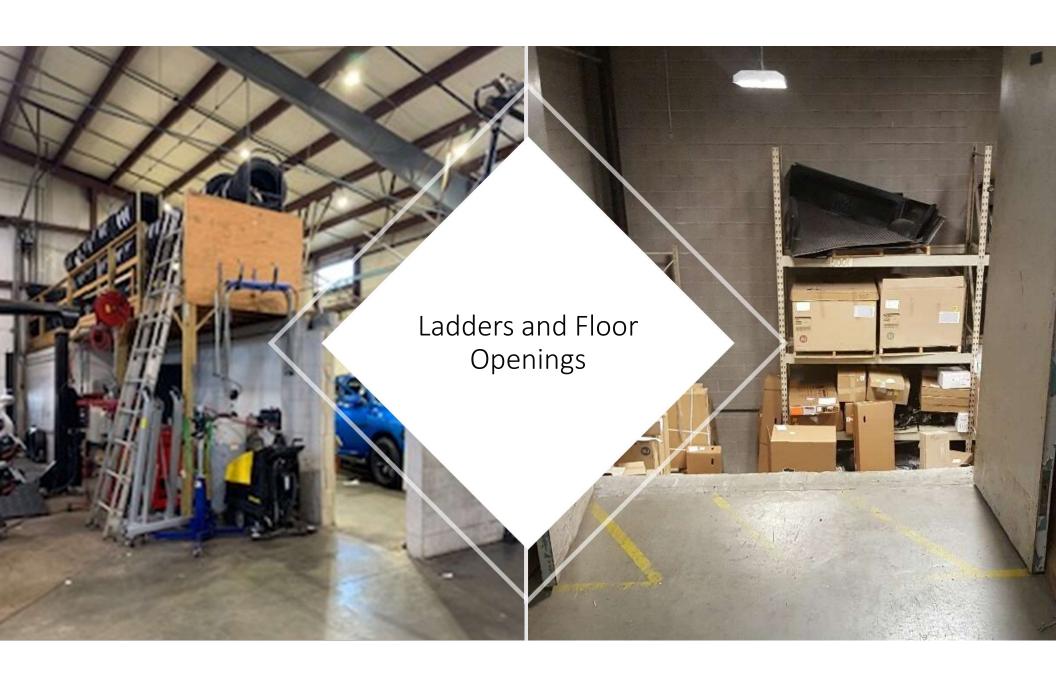

Wet Floors

Stairs

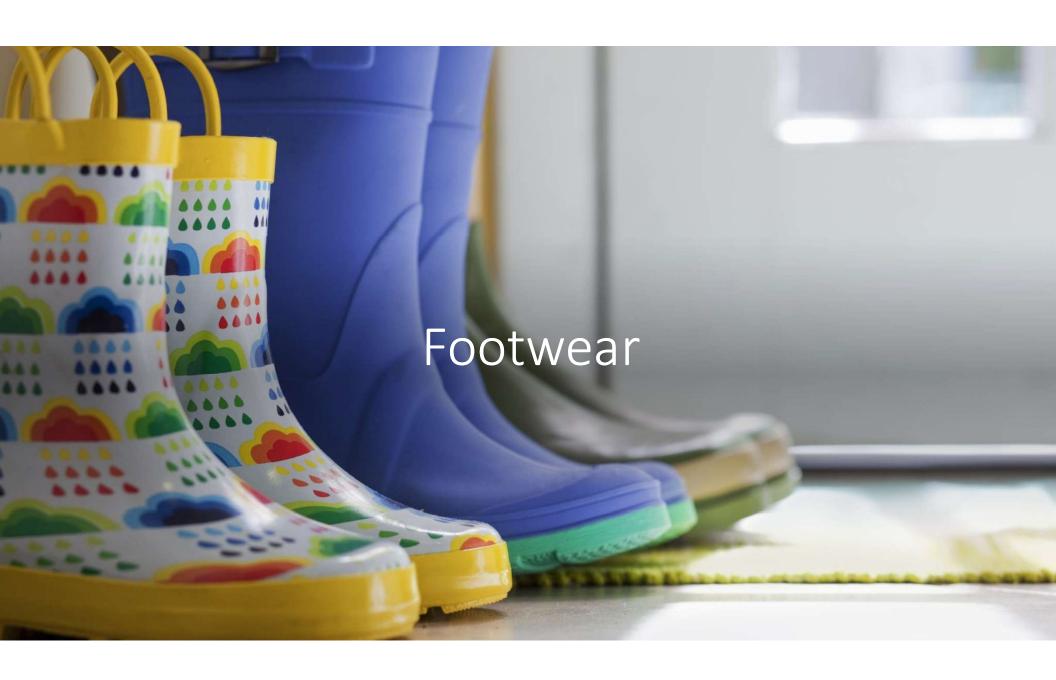

Floor Mats & Rugs

Uneven Surfaces

The Average person takes how many steps per day?

Slip and falls mostly occur on?

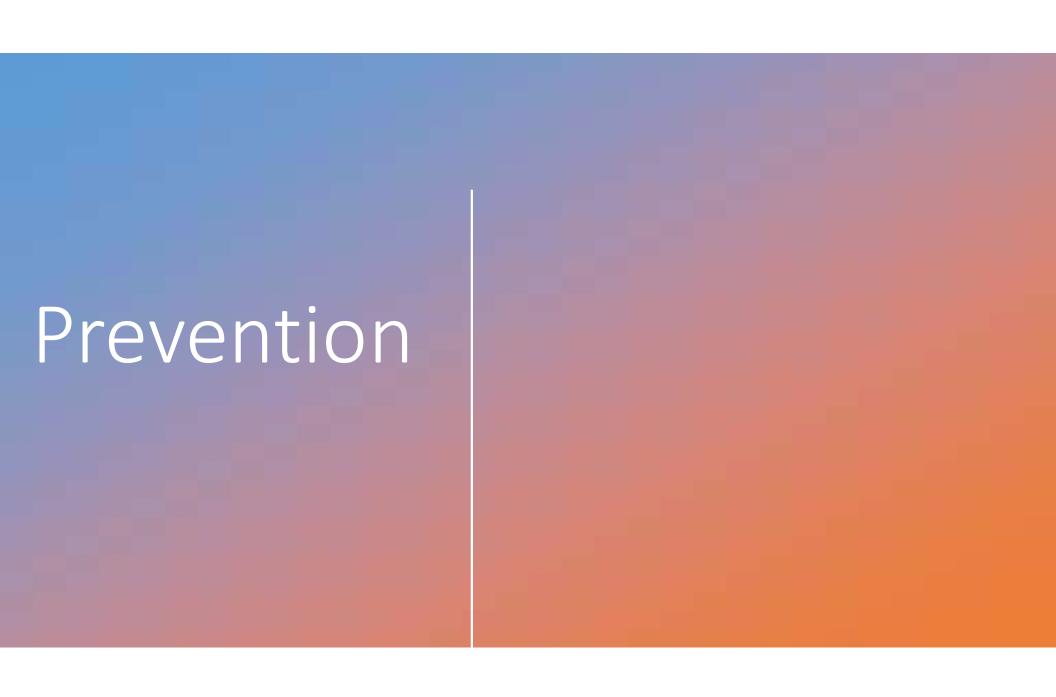

What percentage of trip and falls are caused by improper footwear?

What condition in the workplace is the leading cause of accidental falls?

Minimum
WalkingWorking Surface
Safety
Requirements:

- All passageways, storerooms, service rooms, and walking-working surfaces are kept in a clean, orderly, and sanitary condition.
- The floor of each workroom is maintained in a clean and, to the extent feasible, in a dry condition. When wet processes are used, drainage must be maintained and, to the extent feasible, use dry standing places, such as mats.
- Walking-working surfaces are maintained free of hazards such as sharp or protruding objects, loose boards, corrosion, leaks, spills, snow and ice.

Ice and Snow

Get ahead of and stay on top of winter weather!

- Only use snowblowers in safe working order
- Use quality shovels
- Practice Snow and Ice Removal Safety- Ploughing, Shoveling correctly
- Use salt and other melting agents
- Have a snow and ice removal plan that addresses Freeze/Thaw cycle
- Keep everyone's health and safety the primary focus

Wet Floors

- Resolve wet floors immediately
- Place "Caution Wet Floor" signs out during inclement weather
- Keep drains clear and place non-slip mats in areas where wet floor conditions exist
- Dry mop wet floors several times throughout the day
- Large V. Small spills (effective spill kits and absorbents)

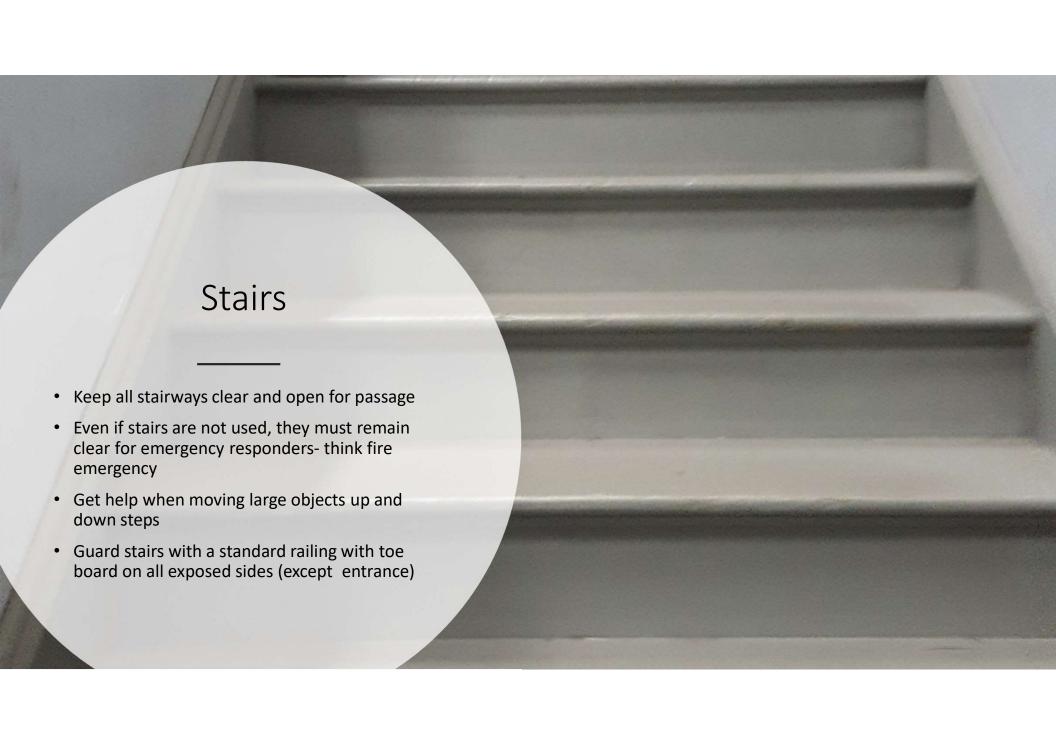

Aisles

- Remember to practice good housekeeping to prevent slip trip and falls
- Keep all aisles and walkways clean and clear
- Mark permanent aisles and passageways

Ladders

- Broken Ladder- remove from service immediately tag it with "DO NOT USE", put it in a place where it will not be used, and notify your supervisor
- Only have ladders repaired by a repair person or organization approved by the ladder manufacturer
- Never carry a load up or down a ladder
- Never stand on top steps
- Always use three points of contact when ascending and descending a ladder

Hoses and Cords

Awareness- stay aware of your surroundings

Don't place hoses and cords across doors or other common walkways

Coil and store all hoses and cords away and off the floor whenever not in use

Floor Mats and Rugs

- Correct curling and buckling mats
- Curling buckling mats will always increase the chance of serious trip and falls accidents.
- Schedule times throughout the day to correct curling buckling mats.
- If you spot curling or buckling of rugs or mats and its not your department/responsibility report it immediately

Uneven Surfaces

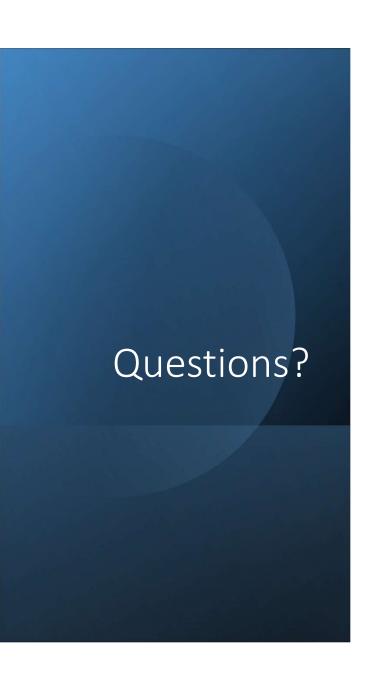

Keep uneven surfaces clearly marked

Put up railing and barriers to prevent trip and falls

1) True or False- good housekeeping is the best method to prevent slip trips and falls?
2) Identify proper footwear:
A)Tennis shoes
B) Flip Flops
C)Crocs
D)Shoes that include ankle support, and non-slip soles
3) True or False- Its completely safe to stand on the very top steps of a ladder
4) How many points of contact should a person always have on a ladder?
A)1
B)2
C)3
D)None of the Above
5) True or False- If a defective ladder is found immediately mark it defective tag it "DO NOT USE" and withdraw it from service until repaired

The problem with ignoring slip, trip, and fall hazards?

Unnecessary Human Suffering- significant and potentially fatal injuries can happen to you and your co-workers
